PROFILE

Full Stack Engineer and Tech Lead with 6+ years of experience shipping production-grade web applications across the complete stack. I have led teams, owned features end to end, and delivered for companies in Austria, Switzerland, Germany, and Kosovo — as well as freelance clients across Europe and Africa.

My stack covers TypeScript, JavaScript, Node.js, Nest.js, Next.js, Nuxt.js, React.js, Vue.js, PHP, Laravel, PostgreSQL, Docker, REST APIs, WordPress, and headless CMS. I work well in Agile teams, I communicate directly, and I take responsibility for what I build — from the first line of code to the moment it goes live.

I am not someone who waits to be told what to do. I identify problems early, raise them clearly, and fix them. I have mentored developers, led code reviews, managed client relationships, and delivered under pressure — repeatedly. If you need someone senior who can lead and still build, that is exactly what I do.

WHAT I BRING

- | | |
|---|---|
| ✓ End-to-end feature ownership | ✓ Legacy migration and codebase modernisation |
| ✓ Technical leadership and team mentoring | ✓ Cross-functional Agile delivery |
| ✓ Client communication and project management | ✓ WCAG accessibility and performance optimisation |
| ✓ Full stack architecture and API design | ✓ CMS integration and e-commerce platforms |

PROFESSIONAL EXPERIENCE

Full Stack Engineer

Ringana | *September 2025 – Present · Austria · Full Remote, Quarterly On-site*

- Own features end to end across two product teams, from scoping and architecture through to deployment and monitoring.
- Leading modernisation of legacy systems: migrating outdated PHP codebases to modern stacks, replacing legacy CMS setups with scalable headless solutions, and redesigning existing frontends to improve performance and maintainability.
- Switching and rebuilding frontend frameworks where the old approach was no longer fit for purpose, choosing the right tool for each context across Nuxt.js, Next.js, React.js, Vue.js, and WordPress.
- Shipping full-stack features using TypeScript, JavaScript, PHP, and Docker in an Agile environment with Git and Bitbucket.
- Collaborating across time zones with engineers, designers, and product owners to keep delivery moving without losing quality.

Full Stack Engineer and Tech Team Lead

the eksperts | March 2023 – September 2025 · Switzerland · Remote

- Led the technical team for over two years while staying fully hands-on across the entire stack — responsible for architecture decisions, code quality, delivery, and team direction throughout.
- Built and shipped full-stack applications for business clients across Switzerland using Next.js, Vue.js, React.js, Node.js, Nest.js, Express.js, PHP, Laravel, PostgreSQL, and Prismic CMS.
- Designed, built, and optimised REST APIs powering high-traffic client platforms, improving response times and reliability through careful architecture and query optimisation.
- Delivered e-commerce platforms and content-heavy websites end to end from database design and API layer through to frontend implementation, testing, and deployment.
- Ran sprint planning, backlog management, and delivery coordination across engineering and business stakeholders, keeping multiple concurrent projects on track and within scope.
- Established code review processes and shared development standards that raised team output quality and significantly reduced production incidents.
- Worked directly with clients to gather and translate requirements into technical scope, then communicated progress clearly throughout, building trust and long-term relationships.
- Ensured WCAG accessibility compliance and performance best practices across all client-facing products.

Full Stack Engineer

StarLabs | 2021 – 2023 · Kosovo

- Built and maintained high-performance web applications for multiple clients using Vue.js, React.js, Angular.js, Node.js, Nest.js, PHP, WordPress, and Tailwind CSS.
- Led end-to-end delivery on multiple concurrent projects, taking ownership from technical planning through to deployment and client handover.
- Introduced and enforced code review processes that reduced production bugs and improved team output quality.
- Developed fully responsive, accessible frontends following WCAG standards, and implemented AJAX and JSON-driven content using Alpine.js.
- Managed Git workflows and worked daily with designers, product managers, and QA in a structured Agile environment.

Full Stack Engineer and Project Leader

MakerMinds GmbH | 2019 – 2021 · Germany · Remote

- Delivered 7 full-stack web applications from scratch, owning every stage: architecture, development, testing, and deployment.
- Led a multidisciplinary team, setting technical direction and working directly with stakeholders to align delivery with business goals.
- Built production systems using Python, Django, Node.js, Express.js, and modern JavaScript frameworks.
- Designed and delivered a Full Stack training programme covering HTML, CSS, JavaScript, Node.js, React.js, APIs, and databases. Mentored interns on live projects, with several progressing into junior engineering roles.

Full Stack Engineer and Project Manager

SignSoft | 2018 – 2019 · Germany and Kosovo

- Built production full-stack applications using React, Node.js, Vue.js, Angular, MongoDB, Laravel, Symfony, PHP, and Typo3.
- Redesigned and optimised frontend experiences, increasing measurable user engagement by 60%.
- Delivered EEA-compliant websites meeting EU data protection and privacy regulations.
- Managed version control, API testing with Postman, and direct client communication across every project.

WordPress and PHP Developer

Alkos | 2017 – 2018 · Kosovo

- Built custom WordPress themes, plugins, and PHP solutions for e-commerce clients.
- Implemented secure authentication, automated backups, and MySQL database management.

FREELANCE AND INDEPENDENT PROJECTS

Alongside full-time roles I have maintained an active freelance practice, working with clients across Kosovo, Albania, Austria, Switzerland, Slovenia, the Czech Republic, and Africa. Work has included web applications, e-commerce platforms, SaaS products, and bespoke websites across multiple industries.

- Delivered full-stack web applications and e-commerce platforms for international clients, managing discovery, architecture, development, and handover independently.
- Built a reputation for on-time delivery and clear communication, resulting in consistent repeat business and client referrals across different countries.
- Handled the full project lifecycle solo on every engagement: requirements, architecture, build, QA, deployment, and client training.
- Active Fiverr profile with international clientele: [fiverr.com/s/bdR9KoN](https://www.fiverr.com/s/bdR9KoN)

TECHNICAL SKILLS

Frontend

Next.js	Nuxt.js	React.js	Vue.js	Angular.js	TypeScript
JavaScript	Tailwind CSS	HTML5	CSS3	Alpine.js	

Backend

Node.js	Nest.js	Express.js	PHP	Laravel	Symfony
		Python	Django		

Databases and APIs

PostgreSQL	MySQL	MongoDB	REST APIs	Postman
------------	-------	---------	-----------	---------

CMS and Tools

WordPress	Prismic CMS	Typo3	Docker	Git	Bitbucket
		Trello			

Practices

Agile / Scrum	CI/CD	WCAG	EEA Compliance	Mobile-First	Code Review
---------------	-------	------	----------------	--------------	-------------

EDUCATION

BSc Computer Science, Software Engineering [AAB College, Kosovo](#) *October 2021 – June 2024*

AS Computer Science [University of the People \(Online\)](#) *June 2022 – May 2024*

Full Stack Developer Programme [Arra Academy, Kosovo](#) *January – July 2022*

Java Developer [Probit School, Kosovo](#) *January 2017 – April 2018*

LANGUAGES

Albanian Native **English** Full Professional Proficiency

I build things that work, lead teams that deliver, and take full ownership at every stage.
